YUSRA IMRAN

IT Student | SOC Analyst
yusraimran1435@gmail.com | Punjab, Pakistan | github.com/yusra2801 | LinkedIn | Portfolio: yusra-portfolio-one.vercel.app

SUMMARY

Cybersecurity-focused IT student working towards a SOC Analyst role. Hands-on experience through cybersecurity internships, TryHackMe labs and SOC labs in Splunk, phishing analysis and threat intelligence. Detail-oriented and eager to grow in security.

TECHNICAL SKILLS

Security: Splunk (SPL, Dashboards & Alerts), Log Analysis (SIEM), Phishing Email Analysis, Threat Intelligence (AbuseIPDB, VirusTotal), MITRE ATT&CK & Cyber Kill Chain, Nmap, Metasploit (Basics), OWASP ZAP, OSINT Tools
Foundations: Python (Security Scripting), Networking Fundamentals, Linux & Windows, DNS & Cryptography Basics, Git & GitHub, MS Word/Excel/PowerPoint, Strong Foundation in Mathematics

EXPERIENCE / INTERNSHIPS

SOC Analyst Intern — TechBiz Security Academy | *Completed, Sep 2026 | Credential ID: CERT-2026-00175*

- Built a SOC Monitoring Dashboard in Splunk (2 panels) and a High Failed Login Alert (threshold above 5) that triggered as tested.
- Ingested a 20-event authentication log into Splunk and used SPL searches with a time-range filter to isolate 12 failed logins.
- Analysed a phishing email (spoofed sender, mismatched link, tracking pixel), scanned the URL on VirusTotal: Phishing verdict, 8 red flags.
- Investigated a suspicious IP on AbuseIPDB and a file hash on VirusTotal; mapped MITRE ATT&CK T1110 onto the 7 Cyber Kill Chain stages.
- Certificate: Verify | Lab reports: Portfolio (SOC Labs)

Cybersecurity Intern — CodeAlpha | *Aug 10 - Sep 10, 2026 | Completed | Credential ID: CA/DF1/241209*

- Built a Python (scapy) network sniffer and a simplified Intrusion Detection System detecting port scans and access to high-risk ports.
- Developed a phishing awareness module (9-slide presentation + interactive HTML quiz); delivered all tasks on GitHub with READMEs.
- Certificate: View Certificate | Letter of Recommendation: View LOR

Cybersecurity Intern — Sqrock IT Solution | *Aug 12 - Sep 12, 2026 | Completed*

- Completed a 30-day, two-phase Python security internship: Social Engineering Attack Simulations and Web Application Security & Defensive Automation.
- Built an OSINT scanner, phishing URL scorer, honeypot server, ML phishing classifier (Naive Bayes, 93.33% accuracy), SIEM log parser and incident-response script. GitHub

LEARNING & DEVELOPMENT

TryHackMe: Top 8% rank, 46 rooms, 15 badges (Intro to SIEM, Phishing Emails in Action, Threat Intelligence Tools, Investigating Windows, Cyber Kill Chain, Intro to Logs, Pentesting Fundamentals)
Cisco Networking Academy: Introduction to Cybersecurity, Jul 2026 - View Certificate
Google (Coursera): Foundations of Cybersecurity, 92.79% - Verify | Play It Safe: Manage Security Risks, 94.80% - Verify

EDUCATION

University of the Punjab (2024 - 2026): ADP Information Technology - papers completed, result awaited
Intermediate (Pre-Engineering): Grade B | **Matriculation:** Grade A
